an international group of researchers has met every 2 years since 1981 to examine the progress made in limb salvage techniques and the perspectives of this field of surgery in 1989 the fifth international symposium on limb salvage isols was held in saint malo and was attended by more than 300 participants from 34 different countries the 105 papers presented grouped under eleven main headings have been included in this book limb salvage has indeed progressed in the years since the first symposium initially it essentially concerned tumours and the main aim was to salvage the diseased limb through non mutilating surgery without jeopardizing the patient's prospects of survival now with a confirmed high rate of 5 year disease free survival new goals can be set improvement of the functional results and of the survival of our reconstructions how can this be achieved by favouring muscle reattachment on the prosthesis for instance through the use of a bone allograft sleeved composite prosthesis by improving the survival of the arthroplasty through the development of a more biological fixation of its stems by limiting the

side effects of the necessary adjuvant treatments on the function of the allograft as well as on the fixation of the prosthesis in addition limb salvage procedures now concern not only primary tumours and metastases which must be treated using the same osteosynthetic and prosthetic techniques but also reconstructive orthopaedic surgery as a whole

filling an unmet need this book covers all relevant aspects of revision shoulder arthroplasty edited by internationally renowned experts in the field it offers the reader solid theoretical and practical knowledge to address this complex surgical procedure the chapters are grouped into seven sections each addressing a macro topic arthroplasty failure pre operative planning and operative techniques the failed glenoid and humerus infections instability and soft tissue management and surgical outcomes this book offers a timely and up to date resource for shoulder surgeons wishing to deepen their knowledge of this complex and challenging procedure

early in its development the subject matter of any field of surgery is too ill defined and opinions are too fluid for the production of a book on the subject to be possible late in its development controversy is at an end and although it is still possible to produce a textbook it is too late to produce a book that might stimulate discussion and crystallise ideas this book has that objective it being the editor s view that the field of the surgical treatment of arthritis of the knee had reached an appropriate intermediate stage in 1978 when this text was written three broad issues stand out as being in need of resolution before the optimum form of surgical treatment for a given knee can be defined more convincingly than is possible at present firstly what symptomatic and physical features of the knee are to be recorded pre and post operatively upon the basis of which comparisons can be made between the results obtained by two different surgeons or with two different tech niques the resolution of this issue requires general agreement not only upon what features of the knee should be recorded but crucially upon how these features should subsequently be presented so as to characterise a particular group of knees
