how do we think about what we plan to do one dominant answer is that we select the best possible option available however a growing number of philosophers would offer a different answer since we are not equipped to maximize we often choose the next best alternative one that is no more than satisfactory this strategy choice is called satisficing a term coined by the economist herb simon this new collection of essays explores both these accounts of practical reason

1 the aim of this essay ethical egoism the doctrine that roughly speaking one should promote one s own good has been a live issue since the very beginnings of moral philosophy historically it is the most widely held normative theory and next to utilitarianism it is the most intensely debated one what is at stake in this debate is a fundamental question of ethics is there any reason except self interest for considering the interests of other people the ethical egoist answers no to this question thus rejecting the received conception of morality is ethical egoism an acceptable position there are many forms of ethical egoism and each may be interpreted in several different ways so the relevant question is rather is there an acceptable version of ethical it is the main aim of this essay to answer this question this egoism means that i will be confronted with many other controversial questions for example what is a moral principle is value objective or subjective what is the nature of the self for the acceptability of most ver sions of ethical egoism it has been alleged depends on what answers are given to questions such as these i will show that in some of these cases there is in fact no such dependence it is of course impossible to ad equately discuss all these questions within the compass of my essay

the quality of ecosystems is affected by the actions of different stakeholders who use them in a variety of ways in order to understand this complex relationship between humans and nature it is vital to understand the complexity of the interacting agents the authors in this book attempt to do this by applying multi agent systems to the problems of ecosystem management the multi agent approach to ecosystem management is a relatively new and rapidly developing field which takes a formal computational approach towards the interaction of humans with their environment the authors highlight some of the promising new methodologies which are emerging in the field from disciplines such as computer science and computational social science they move on to address a number of important topics including diffusion processes common pool resources land use change and the participatory use of models in an attempt to solve contemporary management issues they clearly demonstrate the potential utility of multi agent systems in the context of theoretical problems and practical case studies

in this book the author argues that moral principles are principles of rational choice according to the usual view of choice a rational person selects what is likely to give the greatest expectation of value or utility but in many situations if each person chooses in this way everyone will be worse off than need be instead professor gauthier proposes a principle whereby choice is made on an agreed basis of co operation rather than according to what would give the individual the greatest expectation of value he shows that such a principle not only ensures mutual benefit and fairness thus satisfying the standards of morality but also that each person may actually expect greater utility by adhering to morality even though the choice did not have that end primarily in view in resolving what may appear to be a paradox the author establishes morals on the firm foundation of reason
